PHYTOGENIC MIXTURES FOR SWINE

WHY IS IT WORTH USING PHYTO PIG?

The phytogenic PHYTO PIG mixture is a response to the growing awareness of animal nutrition. The basis for the development of high-quality phytogenic feed additives is the natural wealth of plants and the active substances obtained from them. These substances, present in plants in low concentrations after appropriate processing and in the right combination, have an extremely strong effect. Well-being, immunity and high efficiency are the main goals that animal breeders strive for. Health and immunity depend on the condition of the intestines, which are the pillar of the immune system. It is in them that 80% of immune bodies are created. Building acquired immunity, i.e. the immunity that the body must learn, takes place in this organ.

To sum up, if we achieve a balance of intestinal flora, we will achieve success in other health areas. Inadequate feeding can cause this organ to become the weakest point of the animals' natural defense.

PHYTO PIG

MIXTURE

- 1 Better mood.
- 2 Increasing feed efficiency in terms of health, immunity and growth.
- 3 Improving milk quality.
- 4 Naturally strengthens metabolism through stimulation.
- 5 Optimization of food and energy intake.
- 6 Reducing the frequency of diarrhea.
- 7 Longer-lasting natural immunity.
- 8 Higher growth of muscle mass.
- 9 Increasing the amount of food intake.
- 10 Anti-inflammatory effect.
- 11 Antipyretic effect.
- 12 Antiparasitic effect.

PHYTO PIG is a balanced herbal mixture. The active pharmacological ingredients contained in it nourish the intestine and direct it to proper functioning.

ACTION

Natural support and nutrition. Contains effective ingredients that increase appetite and stimulate digestion. It is a natural alternative to antibiotics and growth stimulants.

It improves protein utilization, which reduces nitrogen losses in feces and urine. This has a positive impact on zoological conditions and energy balance.

PHYTO PIG provides ground level support regarding the threats that may arise develop into disease states such as:

- **Toxins:** peroxides, mitotoxins, endotoxins
- **Bacteria:** Clostridium, salmonella
- **Viruses:** rotaviruses,
- **Parasites:** ascaris, coccidia.

If we can protect the body from developing a disease, we will avoid decreased appetite, decreased absorption of nutrients and lower treatment costs.

BENEFITS

Phytogenic feed additives increase its intake and increase production. By stimulating the metabolism, herbs counteract inflammation of the digestive tract, have antidiarrheal, anti-inflammatory, antiparasitic and antipyretic properties, thus improving the health of animals. Herbs, due to their wide and unique range of pharmacologically active substances, have very specific effects. The advantage of using them is that there is no problem of drug resistance.

Introducing herbs into the diet brings measurable financial effects measured by increased weight gain. Better feed utilization caused by phytogenic feed additives allows producers to optimize feed costs and thus increases the profitability of production.
